

SIH AI Document Intelligence – Test Document

This PDF is a sample document for testing the SIH AI/ML Retrieval-Augmented Generation (RAG) system.

Artificial Intelligence

Artificial Intelligence (AI) is a field of computer science that focuses on creating systems that can perform tasks that normally require human intelligence. These tasks include reasoning, learning, understanding language, recognizing patterns, and making decisions.

Machine Learning

Machine Learning (ML) is a subset of Artificial Intelligence. It enables computers to learn patterns from data and make predictions or decisions without being explicitly programmed for every task.

RAG System

Retrieval-Augmented Generation combines document retrieval with a language model. The system first searches a knowledge base for relevant information and then provides the retrieved context to the language model so that it can generate a grounded answer.

Test Questions

- What is Artificial Intelligence?
- What is Machine Learning?
- How does a RAG system work?
